Abstracts

Modular tower lights are a part of monitoring and control products under machinery safety systems.

Scope of the Report:

This report focuses on the Modular Tower Lights in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Modular tower lights are mainly used to indicate the status of each machine or process, and thus help supervisors and workers to understand whether it is safe to continue with their work or in the case of any issue, make the required changes.

Most manufacturing facilities are large, and it becomes difficult to check the readings of each machinery individually. Hence, modular tower lights can be placed and programmed to indicate the status as per the end-user's requirements. Modular tower lights also incorporate alarm systems to alert the operator in case of any changes in the process line. These are used where an audible indication is required and in places where any immediate action needs to be taken.

The worldwide market for Modular Tower Lights is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
