A module level circuit breaker is an electrical protection device used in photovoltaic systems. Its main function is to electrically isolate and shut down each photovoltaic module or string independently. It can quickly cut off the flow of current in the event of a fault, maintenance, or system debugging to prevent safety risks such as electrical fires and electric shocks. By providing a single-module-level power-off function, a module level circuit breaker improves the safety and reliability of the photovoltaic system, especially in distributed photovoltaic systems, and can effectively enhance the system's maintenance and emergency handling capabilities.
