The global Moisture Separator Unit market size is expected to reach \$ 197 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

In 2025, global Moisture Separator Units approximately 5,212 units, with an average global market price of around US\$ 21,643 per unit. Gross margin is about 41%. The cost is 12,769 usd. The Production is about 6,000 units. Moisture Separator Unit is a critical heat-exchange and steam-conditioning unit used in power generation systems to remove moisture from turbine exhaust steam and reheat the dried steam before it enters the next turbine stage, thereby improving thermal efficiency and protecting turbine blades from erosion. Upstream, MSRs rely on pressure vessels, heat-exchange tubes, moisture separation internals, alloy steels, and precision fabrication and inspection technologies. Downstream, they are widely installed in nuclear power plants and large fossil-fuel power stations, where they enhance turbine performance, increase power output, and extend equipment service life.
