Abstracts

Moisturizing Cream a cosmetic preparation, as a cream or lotion, used to restore moisture to the skin, especially of the face and neck.

SCOPE OF THE REPORT:

This report focuses on the Moisturizing Cream in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Moisturizers don't actually add moisture. Instead, they attract and trap existing water in the skin. A good moisturizer contains humectants, ceramides and/or emollients that lock water in the outer layer of the skin, giving any damaged cells a chance to repair. Skin type and the degree of dryness will determine what type of hydrator you will best benefit from.

The worldwide market for Moisturizing Cream is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
