## Abstracts

The global Mold Chase for Semiconductor market size is expected to reach \$ 352 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

The Mold Chase for Semiconductor is a precision mold specifically designed for the encapsulation of integrated circuits and discrete devices, employing plastic encapsulation techniques to reliably house semiconductor chips within a plastic shell to meet high-density and high-quality packaging standards. This mold is a crucial process tool in the post-production stage of semiconductor device manufacturing, where its structural design, material selection, and manufacturing precision directly impact the performance, reliability, and production efficiency of the packaged products. In 2025, global Mold Chase for Semiconductor production reached approximately 27.47 k units with an average global market price of around US\$9200 per unit.

Mold Chase for Semiconductor, as 'basic process equipment for industrial production', plays a crucial role in electronics, automotive, and electrical appliance fields, with its product value often being tens to hundreds of times that of the mold itself. Currently, the industry is developing towards complex motion structures, in-mold heating, forging, local temperature control, and other multi-process combinations. 3D printing technology, especially metal additive-subtractive hybrid manufacturing, has become an important direction for cavity mold development. China has established a complete mold industry system with stable operating conditions and economic indicators. With the improvement of semiconductor industry prosperity and packaging technology, multi-injection head molds are gradually replacing traditional single-cylinder molds. Due to their equal-flow-length filling technology, they can effectively avoid defects such as bubbles and pores, achieving more stable product packaging and a wider process adjustment range. At the

policy level, epoxy molding compounds, as key materials in the semiconductor industry chain, are included in various encouraged development catalogs, providing strong support for the industry. In the future, Mold Chase for Semiconductor will continue to develop towards higher precision and complexity to meet the needs of advanced technologies such as multi-chip packaging, promoting the continuous progress of the semiconductor industry.
