According to our (Global Info Research) latest study, the global Mold Cure Automotive Tire Retreading market size was valued at US\$ 536 million in 2025 and is forecast to a readjusted size of US\$ 665 million by 2032 with a CAGR of 3.1% during review period.

Mold Cure Automotive Tire Retreading refers to a remanufacturing process that uses a reusable tire carcass that has been inspected, polished, and repaired as a base. Uncured rubber is added to the tread area, and the tire is placed in a rigid mold with a specific tread pattern and heated for vulcanization. This allows the new tread and the old carcass to re-bond, forming a reusable tire. This process is also called hot retreading or mold vulcanization retreading. Its process is similar to that of new tire vulcanization manufacturing, resulting in better appearance consistency, tread pattern forming precision, and overall integrity. It is used for truck and bus tires, and light truck/SUV tires. The upstream of the industry chain mainly includes retreadable tire bodies, natural rubber, synthetic rubber, carbon black, steel wire, vulcanizing agents, accelerators, antioxidants, tread compounds, rubber formulations, testing equipment, grinding equipment, extrusion equipment, molds, and vulcanizing presses; the midstream involves tire body testing, grinding, repair, rubber coating, compression molding and vulcanization, dynamic balancing, and final inspection; the downstream mainly serves logistics fleets, bus companies, and freight and cold chain enterprises. Gross profit margins range from approximately 20% to 35%.
