## Abstracts

According to our latest research, the global Mold Cure Tire Retreading market size will reach USD 522 million in 2031, growing at a CAGR of 2.1% over the analysis period.

Mold cure tire retreading is a process where a new, uncured rubber tread is applied to a worn tire casing, and the entire tire is then placed into a mold. The mold applies both heat and pressure to cure (vulcanize) the new tread, bonding it to the tire casing. This process allows the tread to take the exact shape of the mold, creating a fresh, custom tread pattern for the tire.
