Mold Inhibitors for Baking are additives used in baked goods, designed to extend the shelf life of products by inhibiting the growth of mold while ensuring food safety and taste. These inhibitors prevent mold growth by interfering with mold growth conditions, such as reducing water activity or changing the pH value of the food surface. Common baking mold inhibitors include natural extracts (such as sodium acetate, calcium propionate) and biological mold inhibitors, which are suitable for foods that are susceptible to mold contamination, such as bread, cakes, and pastries.
