The global Mold Release Agent for Precast Concrete market size is expected to reach \$ 2655 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

A mold release agent for precast concrete is a chemical substance applied to the surface of molds, forms, or form liners to prevent fresh concrete from sticking to them during the curing and demolding process. It ensures clean, smooth separation between the concrete and the mold, protects the mold, and improves surface finish of the final product.

In 2025, global Mold Release Agent for Precast Concrete production reached approximately 853 kilotons, with an average global market price of around US\$ 1,937 per ton.

The upstream supply chain of Mold Release Agent for Precast Concrete mainly supplies basic raw materials including mineral oil, vegetable oil, surfactants, emulsifiers, solvents and functional additives, as well as packaging and auxiliary production materials; midstream manufacturers conduct formula compounding, emulsification, quality testing and finished product packaging to develop formulas adapted to high-frequency mold turnover and steam curing conditions in precast factories; downstream markets focus on industrial precast production plants, prefabricated component manufacturers and infrastructure precast enterprises, with products distributed through direct sales and industrial distributors for mass precast concrete component manufacturing.

The cost structure of precast concrete mold release agents is dominated by raw material costs including base oils and functional chemical additives, followed by

production expenses such as blending, emulsification, quality inspection and packaging; additional costs cover environmental compliance testing, warehouse logistics, formula research and development, and sales operation, while large-scale mass production and high-concentrate product design can reduce unit costs, and high-performance steam-curing resistant formulations require premium special materials to raise overall manufacturing expenditure.
