Abstracts

The global Mold Release Agent for Tire market size is expected to reach \$ 1062 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

Mold Release Agent for Tire is a professional high-temperature resistant chemical lubricant specially developed for tire vulcanization molding, which is coated on the inner surface of tire molds to form a thin, stable isolation film. It effectively prevents unvulcanized rubber compound from adhering to the mold under high temperature and high pressure during tire curing, ensures smooth demolding of finished tires, maintains clean mold surface and perfect appearance of tires, reduces mold damage and cleaning frequency, and supports stable and efficient production of various tires.

In 2025, global Mold Release Agent for Tire production reached approximately 24 million liters, with an average global market price of around US\$ 31 per liter.

The upstream of Mold Release Agent for Tire includes suppliers of core raw materials such as high-temperature resistant silicone oil, modified wax, special resin, fluorine-containing additives, dispersant and water or environmental solvent, as well as providers of chemical packaging materials; the midstream is professional manufacturers that carry out formula design, mixing, emulsification and quality inspection of raw materials to produce targeted release agent products; the downstream is mainly various tire manufacturing enterprises producing different types of tires, and the supporting technical service providers and distributors connect manufacturers and tire plants to provide on-site application guidance and customized formula adjustment.

The cost of Mold Release Agent for Tire is dominated by raw material cost accounting

for 55%–70%, mainly including high-performance silicone oil, high-temperature additives and special functional components; manufacturing cost accounts for 10%–15%, covering energy consumption for production and mixing, equipment depreciation and labor cost; R&D and testing cost accounts for 5%–10%, used for high-temperature resistance verification, formula optimization and adaptability test with different rubber compounds; packaging and logistics cost accounts for 5%–8%, for chemical special packaging and safe transportation; sales and technical service cost accounts for 3%–5%, used for customer on-site commissioning and after-sales support.
