## Abstracts

According to our (Global Info Research) latest study, the global Mold Release Agents market size was valued at US$ 2531 million in 2025 and is forecast to a readjusted size of US$ 3544 million by 2032 with a CAGR of 4.9% during review period.

In 2025, global Mold Release Agents production reached approximately 820 thousand tons, with an average global market price of around USD 3000 per ton.

The gross profit margin of major companies in the industry was approximately 20%–36%.

In 2025, global production capacity of Mold Release Agents was approximately 1.05 million tons.

Mold Release Agents are formulated materials applied to mold surfaces to prevent molded products from adhering during forming and to facilitate clean and efficient demolding. Products include water-based, solvent-based, semi-permanent, silicone-based, wax-based, and other specialized formulations. They can improve mold life, product surface quality, cycle efficiency, and process consistency and are widely used in plastics, rubber, composites, polyurethane, die casting, concrete, and other molding processes.

The industrial chain of Mold Release Agents includes upstream silicones, waxes, oils, polymers, solvents, emulsifiers, surfactants, and functional additives; midstream covers formulation, blending, emulsification, filtration, quality testing, filling, and packaging; downstream applications mainly include plastics, rubber, polyurethane, composite

materials, automotive components, die casting, concrete products, tires, and general industrial molding.

Mold release agents are process chemicals applied between molds and molded materials to reduce adhesion and enable clean, efficient removal of finished parts. They are widely used in plastics, rubber, composites, polyurethane, concrete, die casting, and other molding processes. Market demand is supported by growth in automotive, construction, aerospace, electronics, consumer goods, and composite manufacturing, together with increasing requirements for production efficiency and surface quality. Product development is moving toward longer-lasting release performance, lower application rates, reduced residue, improved surface finish, and compatibility with automated molding operations. Water-based, semi-permanent, and low-emission formulations are gaining attention as manufacturers seek to reduce volatile emissions and simplify downstream cleaning. Advanced composites, lightweight automotive components, wind-energy components, and precision molded products provide additional opportunities for specialized release agents. However, increasingly stringent environmental regulations, compatibility requirements with different mold and substrate materials, potential interference with subsequent coating or bonding processes, and price competition can constrain growth. Future development will emphasize cleaner formulations, higher release efficiency, process stability, automation compatibility, and application-specific performance.
