According to our (Global Info Research) latest study, the global Mold Release and Process Aid Additives market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Mold release additives are specifically used to prevent adhesion between the material and the mold, facilitating easy release, while process aid additives are added to improve processability and enhance performance during manufacturing. Both types of additives play important roles in achieving high-quality products and efficient production processes.

Mold release additives and process aid additives are two different types of chemicals used in various manufacturing processes. They serve different purposes and provide specific benefits.

Mold Release Additives: Mold release additives are substances added to materials or coatings to prevent adhesion or sticking between the material and the mold or tooling surface. These additives reduce friction and create a barrier that allows the molded product to be easily released from the mold without damage. Mold release additives are commonly used in processes such as injection molding, blow molding, rotational molding, and casting. They are typically incorporated into the material formulation or applied as a separate coating.

Process Aid Additives: Process aid additives, also known as processing aids or

processing additives, are substances added to materials to improve their processability and enhance performance during manufacturing or processing. These additives are designed to optimize various aspects of the manufacturing process, such as flowability, lubrication, stability, heat resistance, anti-static properties, and more. Process aid additives are used in a wide range of industries, including plastics processing, rubber compounding, coatings and paints, textile manufacturing, and many others. They are typically added to the material formulation or applied during the processing stage.
