The global Mold Test Chamber market size is expected to reach \$ 124 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

Mold Test Chamber is a special equipment used to simulate the mold growth environment. It is mainly used to simulate and test the ability of products to resist mold growth in a humid environment. It sets up corresponding conditions in a confined space by precisely controlling temperature, humidity, light and other conditions, so that mold can grow in about 4-6 hours, and evaluates the mold resistance and corrosion resistance of materials, electronic components, packaging and other products in a humid and warm environment. It is suitable for testing and evaluation in the automotive, electronic appliances, food packaging and other industries.
