Molded aspherical glass lenses are a type of micro aspherical glass lens that is manufactured using a precision glass molding process. This process involves heating a glass preform and pressing it into a mold with a non-spherical shape, using high pressure and temperature to shape the glass into the desired shape. The mold is typically made from a hard material, such as tungsten carbide or silicon carbide, and is machined to an accuracy of a few microns. Molded aspherical lenses are highly precise and offer several advantages over traditional spherical lenses, including reduced spherical aberration, improved image quality, and reduced weight and size. They are commonly used in a variety of applications, including digital cameras, medical instruments, and telecommunications equipment.
