The global Molded Case Automatic Transfer Switch market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Molded case automatic transfer switch (MCATS) is an electrical switchgear used to transfer power between two different power supplies (usually between the main power supply and the standby power supply). The switch is designed to automatically detect the power failure of the main power supply and transfer the load to the standby power supply within a few milliseconds to ensure uninterrupted power supply. Molded case automatic transfer switch is an important component in the standby power supply system. It provides seamless and automatic power transfer in case of power failure and ensures continuous power supply to key loads.
