Automatic transfer switch (ATS) is a key component of any emergency or standby power system. The change-over switch is a reliable, solid, universal and compact component. Its function is to automatically switch to the standby power supply through Automatic transfer switch (ATS) is a key component of any emergency or standby power system. Molded Case Type Automatic Transfer Switches is generally composed of contact system, arc extinguishing system, operating mechanism, release, shell, etc. In case of short circuit, the magnetic field generated by large current (generally 10 to 12 times) overcomes the reaction spring, the release pulls the operating mechanism, and the switch trips instantaneously. In case of overload, the current will increase, the heat will increase, and the bimetallic sheet will be deformed to a certain extent to promote the mechanism action (the greater the current, the shorter the action time).
