According to our (Global Info Research) latest study, the global Molded Coupled Inductor market size was valued at US\$ 160 million in 2024 and is forecast to a readjusted size of USD 355 million by 2031 with a CAGR of 12.0% during review period.

Molded coupled inductor is a kind of integrated inductance device which integrates magnetic material and coil by injection molding or molding process. Its core feature is that the coil winding and core structure are tightly wrapped by magnetic powder or resin matrix composite material to form compact and highly reliable electromagnetic components. The process can significantly improve the mechanical strength and heat dissipation performance of the device and optimize the magnetic field coupling efficiency, which is suitable for high-frequency and high-power density power electronic scenarios.
