According to our (Global Info Research) latest study, the global Molded Transformers market size was valued at US\$ 4993 million in 2024 and is forecast to a readjusted size of USD 6712 million by 2031 with a CAGR of 4.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Molded Transformers are transformers that encapsulate the windings and core in epoxy resin or other insulating materials. This design gives the transformer higher mechanical strength, better insulation performance and longer service life. The encapsulation of epoxy resin or other insulating materials gives the transformer high mechanical strength and can withstand shock and vibration during transportation and installation. The encapsulation material has high dielectric strength, which can effectively prevent short circuits and leakage, and improve the operating safety of the transformer. Molded transformers are widely used in power systems, industrial equipment and special environments.
