Abstracts

This report mainly studies the Molding Machine Loading Manipulator market. A Molding Machine Loading Manipulator is a device used to handle and manipulate molds in the molding process. Molding Machine can mass-produce precision glass lenses. The aspherical molding machine uses optical glass precision molding technology. This technology is a high-efficiency, green and environmentally friendly high-precision optical element manufacturing technology. It puts softened glass into a high-precision mold and heats and pressurizes it. Under oxygen-free conditions, optical components that meet the usage requirements can be produced directly through one-time molding.

According to our (Global Info Research) latest study, the global Molding Machine Loading Manipulator market size was valued at US\$ 14.7 million in 2023 and is forecast to a readjusted size of USD 34.9 million by 2030 with a CAGR of 10.5% during review period.

Glass lenses have high advantages in terms of light transmittance, refractive index, temperature range, distortion rate, wear resistance, chromatic aberration, imaging effect and stability. With the rapid development of the global automotive industry, aspheric glass lenses can more accurately match the high-quality requirements of on-board cameras under the intelligent trend. Optical components, as an important entrance for information collection at the perception layer such as vehicle lenses and lidar, will benefit from the development of the smart driving market. As the glass lens market continues to expand, as an important production equipment for molding glass lenses, molding machines and Molding Machine Loading Manipulator will also benefit and have broad room for development.
