According to our (Global Info Research) latest study, the global Molds for Glass Lenses market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The high precision of optical molds is mainly achieved by high-precision mold design and mold processing equipment. The mold can mainly ensure the surface shape accuracy, eccentricity and surface finish of the formed lens. The surface shape accuracy P-V of the optical lens after molding can reach ± 0.1 to $\pm 0.5\mu\text{m}$, dimensional accuracy and eccentricity can reach less than $2\mu\text{m}$. The precision of the mold itself is higher. For example, the dimensional accuracy of the mold core itself is less than $0.5\mu\text{m}$. This report studies molds for glass lenses.
