## Abstracts

Molecular diagnostics is a technique used to detect the presence of and identify genetic materials and proteins associated with specific health conditions and diseases, and infectious agents in body fluids such as blood, urine, or sputum. Molecular diagnostics for infectious disease testing is used by hospitals, academics institutions, laboratories, and others. Increasing number of infectious diseases and technological advancement in diagnostic technologies for infectious diseases are some major driving factors for molecular diagnostics in the infectious disease testing market. Molecular diagnostics technologies are mainly used to diagnose diseases such as AIDS, tuberculosis (TB), hepatitis, and hospital-acquired infections.
