## Abstracts

Molecular diagnostics is the application of medical and microbiological technologies to the medical imaging science, in order to analyze biological markers present in the proteome and genome, which also includes the study of how an individual express his/her genes as proteins. This is an important diagnostic and patient monitoring technique, which not only diagnose the disease but also assess the risks involved in treatment and suggest suitable therapies for the patients. Nucleic acid test, or nucleic acid amplification test (NAT/NAAT) is another molecular technology used in identification of a bacterium or virus. NAT comprises of all the tests and technologies used to identify genetic material of infecting virus or organism.
