A molecular pump is a type of vacuum pump, a vacuum pump that depends for its action on the adhesion of the gas or vapor molecules to a rapidly moving metal disk or cylinder by which they are carried away, used to obtain and maintain high vacuum.

Scope of the Report:

This report focuses on the Molecular Pump in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. China is the dominate consumer of Molecular Pump, the consumption was 40960 Units in 2016, accounting for about 22.25% of the total amount, followed by Europe, with the consumption market share of 21.45%.

At present, in the Japan and Europe industrial developed countries the Molecular Pump industry is generally at a more advanced level, the world's large enterprises are mainly concentrated in the Europe and Japan, etc. accounted for most of the international market share. Meanwhile, these companies have more advanced equipment, strong R&D capabilities; the technical level is in a leading position. But foreign companies' manufacturing cost is relatively high, compared with Chinese companies, the manufacturing cost is competitive disadvantage, as the Chinese Molecular Pump production enterprise technology continues to improve, their share in the international market is increasing, competitiveness in the international market gradually increase. The worldwide market for Molecular Pump is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
