Abstracts

Molecular sieve for air separation and purification unit is sodium aluminosilicate. It is used for drying general industrial gas and purifying raw gas of air separation unit (simultaneously removing H₂O, CO₂ and some hydrocarbons). It meets the special requirements of the cryogenic air separation industry, improves the adsorption capacity of carbon dioxide and water, avoids the phenomenon of freezing tower in the air separation process, and has the characteristics of high carbon dioxide adsorption, low regeneration temperature, long service life, etc. It is used for drying general industrial gas and purifying raw gas of air separation unit.
