Abstracts

The global Molecular Sieve Dehydration Unit market size is expected to reach \$ 2633.2 million by 2029, rising at a market growth of 5.1% CAGR during the forecast period (2023-2029).

Water or other impurities present in the natural gas can increase the risk of damage to the pipeline as the result of corrosion or hydrate formation. Mol sieve dehydration is a process where water vapors are removed from the gas streams using the highly effective desiccant material known as molecular sieves. Molecular sieve dehydration units mainly have gas phase and liquid phase two types.
