Abstracts

Molecular sieves are the material with small pores of uniform size. Molecular Sieves are crystalline alumino- silicates known as Zeolites. Molecular sieves crystals characterized by three-dimensional pore systems along with same crystals identified together.

Scope of the Report:

This report focuses on the Molecular Sieves in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Molecular sieves are used as absorbents for fluids (gas and liquids). Molecular sieve absorbents have ability to separate fluids on the basis of molecular size and polarity. In case of hydrocarbon parafines, straight molecules fit into pores and get adsorbed. The branched molecules can't fit into pores and pass through sieve bed.

The worldwide market for Molecular Sieves is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
