The global Molten Metal Protective Jacket market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A molten metal protective jacket is a specialized garment designed to provide protection against the hazards of molten metal splashes and radiant heat. It is constructed using flame-resistant materials that are specifically engineered to withstand extreme temperatures and shield the wearer from molten metal droplets. The jacket typically features multiple layers of heat-resistant fabric, often including materials like aluminized Kevlar or fire-resistant treated cotton, for enhanced protection. It is tailored to fit loosely, allowing air circulation while providing coverage to the upper body and arms, thus minimizing the risk of burns or injuries caused by contact with molten metals.
