According to our (Global Info Research) latest study, the global Molten Salt Thermal Energy Storage System market size was valued at US\$ 697 million in 2024 and is forecast to a readjusted size of USD 1220 million by 2031 with a CAGR of 8.3% during review period.

Molten salt thermal energy storage system refers to an energy storage technology by storing heat in the form of sensible heat in molten salt that is liquid at high temperatures. These molten salts are able to remain liquid over a relatively wide temperature range and have high specific heat capacity and thermal stability, making them ideal thermal energy storage media. When energy needs to be released, heat from the molten salt can be transferred to a working fluid (such as water or heat transfer oil) via a heat exchanger to generate steam to drive a turbine generator for power generation or other applications.
