## Abstracts

According to our (Global Info Research) latest study, the global Molybdenum Electrodes for Glass Furnace market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Glass was once considered a luxury. Intricate decoration and clear glass were standard in the houses of wealthy families. This is indicative of high production costs and the limited knowledge of how clear glass was produced at the time. However, as with many expensive commodities, human industrial achievement unleashed glass production on a large scale, making it accessible to a wide range of consumers. Glass electric furnaces are critical to this transformation. Until the 1950s, most industrial-scale production of flat glass was carried out using conventional coal or gas fired furnaces. Engineers looking to harness the growing power to increase process efficiency eventually turned to molybdenum glass melting electrodes. The inherent thermodynamic and electrical properties of molybdenum make it the preferred solution for glass melting electrodes, and despite the timely emergence of alternatives such as platinum and tin oxide, molybdenum remains the material of choice for electrodes in glass electric melting furnaces. Molybdenum is a refractory metal with a melting point of 2620°C (4748°F) and an electrical conductivity in the range of  $1.914 \times 10^7$ . Molybdenum material not only has good electrical and thermal conductivity, but also has excellent corrosion resistance and creep resistance, making it an ideal material for electrodes that withstand high temperatures and corrosive molten glass. The high purity of pure molybdenum ensures that the glass will not be affected by impurities during the production process, and the finished product is clear in color and free of impurities, which not only improves the yield

of finished products, but also reduces production costs.
