Abstracts

The global Molybdenum Evaporation Boat market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Thermal evaporation (resistance evaporation) is a coating method employed during physical vapor deposition. The material that is to form the subsequent layer is heated in a vacuum chamber until it evaporates. The vapor formed by the material condenses on the substrate and forms the required layer. Molybdenum boats share properties with their source material, either pure molybdenum or molybdenum alloy. These are formed from processed molybdenum plates that have undergone cutting, folding, riveting, and/or welding.

This report studies the global Molybdenum Evaporation Boat production, demand, key manufacturers, and key regions.
