Abstracts

The global Molybdenum Metal Products market size is expected to reach \$ 23120 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Molybdenum metal products are high-end, high-value-added products obtained by further processing industrial molybdenum oxide or ferromolybdenum through a series of advanced processes such as powder metallurgy, vacuum melting, and plastic forming. Based on their form and application, they can be mainly divided into several categories: plates/sheets, rods/stalks, wires, crucibles, targets, and irregularly shaped parts. In the semiconductor field, molybdenum plates are also used as key components of ion implanters and heat dissipation substrates for power semiconductors. Molybdenum rods and bars are mostly used to manufacture electron tube anodes, grids, and electrodes for electrical discharge machining (EDM). Their excellent electrical and thermal conductivity and dimensional stability ensure reliability during precision machining.

In 2025, global Molybdenum Metal Product sale reached approximately 304,201 Tons, with an average global market price of around 48,860 US\$/Ton. Production capacity reached 450 K Tons, with a gross profit margin of approximately 20%.
