According to our (Global Info Research) latest study, the global Molybdenum Powder market size was valued at USD 841.9 million in 2023 and is forecast to a readjusted size of USD 1167.7 million by 2030 with a CAGR of 4.8% during review period.

Molybdenum (Mo) is a silvery-white shiny metal, hard but at the same time softer and more flexible than tungsten. It has an excellent resistance to corrosion, good wear and resistance to abrasion, and superior thermal and electrical properties. It is an essential element when it comes to alloys, as it enhances hardenability and persistence of tempered and destroyed steels.

Molybdenum powder has a black or dark gray color and it is often confused with graphite. It is primarily used for hardening of iron and steel even though it has other important applications for enhancing the performance in high temperature and aggressive environments as well. It is used as a raw material in an extensive range of applications such as hightemperature furnace heaters, spray coating materials, wires for electronics use, glass melting electrodes, rods and plates, nuclear power paint materials, and much more.

The industry's leading manufacturers are H.C. Starck, Molymet and Plansee, which accounted for 22.18%, 21.04% and 18.44% of revenue in 2019, respectively. By region, Europe has the highest share of income, accounting for more than 38 percent in 2019.
