According to our (Global Info Research) latest study, the global Molybdenum Rotating Target market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Molybdenum rotating target is a key material used internationally for sputtering coating. In the process of sputtering coating, the atoms on the surface of the molybdenum target are sputtered and deposited on the substrate through high-speed ion bombardment to form a layer of uniform film. The rotating target is designed to improve material utilization and deposition efficiency, while reducing uneven wear on the target surface.
