According to our (Global Info Research) latest study, the global Monitor Speakers market size was valued at US\$ 56.89 million in 2025 and is forecast to a readjusted size of US\$ 103 million by 2032 with a CAGR of 9.0% during review period.

Monitor speakers are miniature speakers built into monitor devices. Compact and easy to integrate, they convert electrical signals into audible sound, providing audio output. The monitor speaker module is integrated into the monitor body, enabling both image display and audio playback. The monitor speakers included in this report apply not only to monitors requiring built-in speakers, but also to all-in-one PCs like the iMac. Monitor speakers are widely used in office and entertainment settings, satisfying users' listening needs for watching videos, holding video conferences, and playing audio.

Currently, the penetration rate of monitor speakers remains moderately low, and they haven't become a standard feature in the market. However, as user demand for diverse applications continues to grow, built-in speakers are becoming increasingly common in niche markets such as gaming monitors, all-in-one commercial PCs, portable monitors, and home entertainment monitors, with an increasing number of products incorporating them as a standard feature. Due to space and cost constraints, most monitor speakers use low-power drivers, resulting in mediocre sound quality, particularly weak low-frequency response, which hinders an immersive listening experience. However, with the trend towards ultra-thin and all-in-one designs, manufacturers are optimizing speaker cavity structures and enhancing sound quality with software algorithms such as AI audio processing and virtual surround sound. High integration and intelligence are the future of monitors. Monitors will not only integrate speakers but also cameras, microphones, and other modules to support voice interaction, meeting the diverse needs of daily work and entertainment. In the future, improving sound quality will be a

key development path for monitor speakers. Technologies such as square speakers and low-frequency enhancement will further enhance the audiovisual experience. With the continuous decline in manufacturing costs and users' emphasis on a simple desktop environment, monitors with built-in speakers are expected to achieve wider market applications, simplifying device configuration, reducing wiring, and improving convenience, which is in line with the common pursuit of efficiency and cleanliness in modern office and home environments.
