According to our (Global Info Research) latest study, the global Monitoring Unmanned Surface Vessel market size was valued at US\$ 227 million in 2025 and is forecast to a readjusted size of US\$ 560 million by 2032 with a CAGR of 14.3% during review period.

In 2025, global production of monitoring unmanned surface vessels reached 1,260 units, with an estimated average selling price of US\$175,000 per vessel. Monitoring unmanned surface vessels are unmanned surface platforms equipped with water quality, meteorological, hydrological, acoustic, video, radar, or other environmental sensing payloads. They perform data collection, inspection, monitoring, early warning, and patrol tasks in rivers, lakes, reservoirs, ports, nearshore or open ocean waters. They typically consist of a hull, propulsion system, battery/hybrid power system, GNSS/IMU positioning system, communication link, automatic navigation control system, mission payload, data acquisition software, and shore-based control platform. They can complete tasks such as water quality monitoring, river and lake patrol, marine environmental observation, port inspection, algal bloom early warning, pollution source tracing, and pipeline/bridge/dock inspection through remote control, preset routes, semi-autonomous, or fully autonomous methods. The upstream sector includes composite material hulls, motors, propulsion systems, batteries, GNSS/IMUs, communication modules, water quality sensors, sonar, cameras, and data acquisition software. The midstream sector includes hull manufacturing, automated navigation systems, payload integration, shore-based platforms, and sea trials. Downstream customers include environmental protection departments, water conservancy and hydrology agencies, water utilities, ports and terminals, marine research institutes, energy and marine engineering companies, and surveying service providers. Gross profit margins range from approximately 20% to 35%.
