According to our (Global Info Research) latest study, the global Monoammonium Glycyrrhizinate market size was valued at US\$ 89.3 million in 2025 and is forecast to a readjusted size of US\$ 145 million by 2032 with a CAGR of 7.2% during review period.

Monoammonium Glycyrrhizinate (MAG) is a bioactive compound derived from the root of the licorice plant, *Glycyrrhiza glabra*. It is a white crystalline powder with a special sweet taste and practically no odor. MAG is known for its range of therapeutic properties, including anti-inflammatory, antiviral, and hepatoprotective effects. It is commonly utilized in pharmaceutical and nutraceutical formulations.

In the pharmaceutical industry, MAG is employed for its hepatoprotective properties, making it useful in the treatment of chronic persistent hepatitis, chronic active hepatitis, liver poisoning, and early liver cirrhosis. It is also used topically for allergic or infectious skin inflammation and orally for its aldosterone effects in electrolyte regulation.

Beyond pharmaceuticals, MAG finds applications in the cosmetics industry due to its anti-inflammatory and skin-soothing properties. It is incorporated into skincare products aimed at reducing redness, irritation, and inflammation. In the food industry, MAG serves as a flavoring agent and sweetener, leveraging its high sweetness and low caloric content.

Regionally, Asia-Pacific holds a significant share of the MAG market, with countries like China and India being major producers and consumers. The presence of key manufacturers and the traditional use of licorice in these regions contribute to this dominance. North America and Europe also represent substantial markets, driven by

the pharmaceutical and cosmetic industries' demand for natural compounds.
