## Abstracts

The global Monobloc Graphite Bursting Disc market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029). Monobloc graphite bursting discs are commonly used in industries where pressure relief and safety are critical, such as chemical processing, oil and gas, pharmaceuticals, food and beverage, power generation, and many others. They provide an effective and reliable means of protecting equipment, vessels, and pipelines from overpressure situations, ensuring the safety of personnel and preventing potential equipment failures. A monobloc graphite bursting disc, also known as a graphite rupture disc or graphite pressure relief disc, is a type of pressure relief device used to protect equipment and systems from overpressure situations. It consists of a single piece of graphite material designed to rupture and relieve excess pressure when predetermined pressure thresholds are exceeded.
