## Abstracts

According to our (Global Info Research) latest study, the global Monochrome Laser Multifunction Printer market size was valued at US\$ 2772 million in 2025 and is forecast to a readjusted size of US\$ 3466 million by 2032 with a CAGR of 3.3% during review period.

In 2025, the global production of monochrome laser single-function printers reached 20.722 million units, with an average selling price of \$130 per unit. The global annual production capacity for monochrome laser single-function printers is approximately 30 million units, and the gross profit margin is about 32.5%. A monochrome laser single-function printer refers to a laser printing device that only provides black-and-white text/graphic printing functions and typically does not have multifunction (MFP) capabilities such as scanning, copying, or faxing. It uses laser imaging technology to form a latent image on a photosensitive drum, then develops and transfers toner onto paper, and finally fixes the image through a fusing process. Compared with color laser printers and multifunction printers, monochrome laser single-function printers generally offer lower prices, higher printing speeds, lower cost per page, smaller footprints, and simpler operation. The upstream raw materials for monochrome laser multifunction printers include basic materials and components, lasers and optical components: laser diodes/laser modules, optical lenses, reflectors, and optical path adjustment elements; chassis and structural materials: metal housings, aluminum extrusions, chassis structural parts, shock-absorbing pads, bolts, and seals; and imaging and sensing elements: photoelectric sensors, cameras, CMOS/CCD components for alignment and quality inspection. The midstream includes manufacturers of monochrome laser multifunction printers, while the downstream includes household and commercial applications.

Currently, the global market for monochrome laser multifunction printers has entered a highly mature and intensely competitive development stage, with product feature homogenization becoming increasingly evident, and the competitive focus shifting from basic printing performance toward comprehensive office efficiency solutions. With the normalization of remote and hybrid working models, end users have placed higher demands on the collaborative efficiency of multifunction capabilities—including printing, scanning, copying, and faxing—as well as on mobile connectivity convenience and cloud printing support, driving continuous product evolution toward intelligence, networking, and low-maintenance-cost operations. At the same time, against the backdrop of a predominantly existing-stock market, consumables cost-effectiveness, equipment durability, and energy-saving and environmental performance have become important considerations influencing user purchasing decisions. Although the overall market growth rate has tended to flatten, monochrome laser multifunction printers still maintain a solid demand base in application scenarios such as small-and-medium-sized enterprise office optimization, educational institution document management, and government administrative informatization. The industry as a whole is thus characterized by a development trend featuring stabilizing technological iteration and increasingly prominent service value addition.
