Abstracts

The global Monoclonal Antibodies (mAbs) Biosimilars market size is expected to reach \$ 47538 million by 2032, rising at a market growth of 16.8% CAGR during the forecast period (2026-2032).

Monoclonal antibody (mAb) biosimilars are highly similar, lower-cost versions of approved, brand-name biological drugs used to treat cancers, autoimmune diseases, and infections. They are developed after a reference mAb's patent expires and are proven to have no clinically meaningful differences in efficacy, safety, or quality compared to the original, providing greater patient access to advanced therapies.

The global supply structure has become increasingly multi-polar. SouthKorean companies such as Celltrion and SamsungBioepis have built broad, globally visible portfolios across immunology, oncology, ophthalmology and hematology. Large western pharmaceutical and generic groups such as Amgen, Pfizer, Sandoz, FreseniusKabi, Organon and BoehringerIngelheim compete through regulatory scale, commercialization networks and established healthcare-system access. Indian companies such as BioconBiologics, Dr.Reddy's, Intas/Accord and Lupin combine cost-competitive development with growing regulated-market ambitions. Chinese companies such as Henlius, Bio-Thera, Qilu and Innovent are moving from domestic approvals toward international filings and licensing partnerships. The market is also shaped by partnership models, such as Alvotech/Teva, Formycon/FreseniusKabi, Bio-Thera/STADA and Bio-Thera/GedeonRichter, where one party often leads development and manufacturing while another leads regional commercialization.

Demand growth is being driven by the expansion of biosimilar competition into high-spend reference biologics. The first major wave centered on oncology and immunology

products such as trastuzumab, bevacizumab, rituximab, infliximab and adalimumab. The next wave is expanding into ustekinumab, tocilizumab, ranibizumab, aflibercept, denosumab, eculizumab, omalizumab and other antibody-related products. However, regulatory approval alone does not guarantee rapid uptake. The ASPE report on U.S. biosimilar market entry highlights that market size and entry order affect biosimilar revenues, and that markets such as bevacizumab, rituximab and trastuzumab took time to reach peak biosimilar share. In practice, adoption depends on payer policy, tendering rules, formulary access, physician confidence, patient switching, interchangeability status, originator contracting and supply reliability.

From a product and strategy perspective, the market is moving beyond simple “first biosimilar to a blockbuster mAb” competition. Future differentiation will increasingly depend on high-concentration formulations, citrate-free presentations, prefilled syringes, autoinjectors, interchangeability designations, global dossier reuse, real-world evidence, manufacturing cost control and broad market-access execution. The U.S. and Europe will remain the most valuable regulated markets, but China, India, Latin America, the Middle East and Southeast Asia are increasingly important for volume growth and regional commercialization partnerships. The long-term outlook is positive because many high-value biologics are entering or approaching biosimilar competition, but price erosion can be severe once multiple entrants compete. Companies with integrated R&D, manufacturing, regulatory and commercialization capabilities are therefore better positioned than firms that rely only on low-cost production or single-market approvals.

This report studies the global Monoclonal Antibodies (mAbs) Biosimilars demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Monoclonal Antibodies (mAbs) Biosimilars, and provides market size (US\$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Monoclonal Antibodies (mAbs) Biosimilars that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Monoclonal Antibodies (mAbs) Biosimilars total market, 2021-2032, (USD Million)

Global Monoclonal Antibodies (mAbs) Biosimilars total market by region & country, CAGR, 2021-2032, (USD Million)

U.S. VS China: Monoclonal Antibodies (mAbs) Biosimilars total market, key domestic companies, and share, (USD Million)

Global Monoclonal Antibodies (mAbs) Biosimilars revenue by player, revenue and market share 2021-2026, (USD Million)

Global Monoclonal Antibodies (mAbs) Biosimilars total market by Type, CAGR, 2021-2032, (USD Million)

Global Monoclonal Antibodies (mAbs) Biosimilars total market by Application, CAGR, 2021-2032, (USD Million)

This report profiles major players in the global Monoclonal Antibodies (mAbs) Biosimilars market based on the following parameters - company overview, revenue, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Celltrion, Inc., Samsung Bioepis Co., Ltd., Amgen Inc., Sandoz Group AG, Pfizer Inc., Biocon Biologics Limited, Fresenius Kabi AG, Formycon AG, Alvotech, Teva Pharmaceutical Industries Ltd., etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the world Monoclonal Antibodies (mAbs) Biosimilars market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), by player, by regions, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
