According to our (Global Info Research) latest study, the global Monolithic Refractory market size was valued at US\$ 2189 million in 2024 and is forecast to a readjusted size of USD 3331 million by 2031 with a CAGR of 6.2% during review period.

A refractory material mixed with refractory aggregate with a certain particle size distribution, powder, binder, and admixture, also known as bulk refractory material. It is used for the lining of thermal equipment, directly baked and used without firing process. Compared with refractory bricks, it has the characteristics of simple process (because the firing process is omitted), energy saving, low cost, and convenient mechanized construction. It is better than refractory bricks on some thermal equipment.
