Abstracts

The global Monomaterial PE Dry Food Pouches market size is expected to reach \$ 2194 million by 2032, rising at a market growth of 10.2% CAGR during the forecast period (2026-2032).

In 2025, global monomaterial PE dry food pouches production reached approximately 1,300 Million unit, with an average global market price of around USD 800 per K unit. A factory gross profit of USD 160 per K unit with 20% gross margin. A single line full machine capacity production is around 5 million unit per line per year. downstream demand is concentrated in food and beverage, pet food manufacturer and retail. A cereal manufacturer uses mono-PE stand-up dry food pouches, this allows the product to be fully recyclable in local PE streams, lowers plastic waste and improves shelf stability. Monomaterial PE (polyethylene) dry food pouches are sustainable, flexible packaging solutions constructed entirely from a single PE polymer family. Designed for 100% recyclability, they replace traditional multi-layer laminates (e.g., PET/PE) that are difficult to separate, while still providing essential moisture and oxygen barriers for dry goods like snacks, nuts, and powders.

This report studies the global Monomaterial PE Dry Food Pouches production, demand, key manufacturers, and key regions.
