## Abstracts

The global Monoolein market size is expected to reach \$ 378 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Monoolein is a type of monoglyceride compound formed by esterification of glycerol and oleic acid, and belongs to non-ionic surfactants. Its molecules have both hydrophilic and oleophilic groups, with good emulsifying, dispersing, lubricating, and stabilizing properties. It is widely used in food, medicine, cosmetics, and industrial fields, often used as emulsifiers, stabilizers, and functional additives. In 2025, global Monoolein production reached approximately 94.38 K MT, with an average global market price of around US\$ 2,816 per MT.

The overall market for monoolein is showing steady growth, mainly driven by demand from the food industry, personal care, and pharmaceutical industries. The food industry is the largest application market, and with the increasing demand for processed and functional foods, the demand for safe and stable emulsifiers continues to increase. From the perspective of development trends, the industry is upgrading towards high-purity, bio based, and green sustainable directions, and plant-based products are gradually becoming mainstream. In terms of competitive landscape, the market concentration is relatively low, and the production enterprises are mainly oil chemical plants. Prices are greatly affected by fluctuations in raw materials such as oil and glycerol. Overall, this market belongs to the fine chemical sub sector of 'small and medium-sized, widely used, and steadily growing demand'.

This report studies the global Monoolein production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Monoolein and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
