Abstracts

A monopole antenna is an antenna that is erected perpendicular to the ground or a conducting plane and consists of a conductor, usually an upright metal rod. The monopole antenna uses the natural oscillation of a conductor to generate electromagnetic waves. It is a one-dimensional structure that mainly radiates electromagnetic waves in the vertical direction. Monopole antennas have broadband characteristics and can operate over a wide frequency range, making them suitable for a variety of communications applications, including broadcast and mobile communications.
