The global Monopile for Offshore Wind Power market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Monopile is the most advanced type of foundation for offshore wind turbine construction. Monopiles are steel pipes driven into the seabed. The transition piece, which carries the auxiliary steel members required for safe access and operation of the wind turbine, such as docks, ladders and platforms, is then connected to the monopile foundation. Monopiles are the most commonly used foundations for offshore wind turbines: they are considered the best value for money and are used in water depths of 50 to 60 metres.
