According to our (Global Info Research) latest study, the global Monopile Support Structure market size was valued at US\$ 383 million in 2025 and is forecast to a readjusted size of US\$ 737 million by 2032 with a CAGR of 10.0% during review period.

In 2025, global Monopile Support Structure reached approximately 131,079 tons, with an average global market price of around US\$ 2836 per ton. Gross margin is about 42%. The cost is 1,644 usd. Production Capacity is about 200,000 tons. A Monopile Support Structure is a widely used offshore wind turbine support structure consisting of a single large-diameter steel pipe pile driven vertically into the seabed. It serves as the primary foundation type for wind turbines installed in shallow to moderate water depths (typically up to 30?40 meters). The monopile is directly connected to the transition piece and turbine tower, providing a simple, cost-effective, and structurally robust solution. Wind monopile foundation upstream mainly involves heavy steel plates, flanges, welding and corrosion-protection materials, while downstream is driven by offshore wind farm developers, EPC contractors, and marine installation companies for turbine foundation construction.
