Abstracts

According to our (Global Info Research) latest study, the global Monopulse Radar market size was valued at USD 2726.7 million in 2022 and is forecast to a readjusted size of USD 4457.4 million by 2029 with a CAGR of 7.3% during review period.

The development trend of monopulse radar is focused on improving its performance, accuracy, and versatility. Monopulse radar systems are being developed to operate at higher frequencies, such as millimeter-wave frequencies, to achieve better resolution and accuracy. Higher frequencies also enable the detection of smaller targets and improve the radar's ability to penetrate through various atmospheric conditions. Traditional monopulse radar systems use analog beamforming techniques to steer the radar beam. However, there is a growing trend towards digital beamforming, which allows for more precise control of the radar beam and enables adaptive beamforming techniques. Digital beamforming also offers the advantage of reducing the hardware complexity and cost of the radar system. Monopulse radar systems are being developed with multi-function capabilities, allowing them to perform multiple tasks simultaneously. For example, a monopulse radar system can be designed to perform both surveillance and tracking functions, providing a comprehensive situational awareness capability.
