According to our (Global Info Research) latest study, the global Monostable Trigger market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A monostable trigger has only one stable state, a transient state. A monostable trigger can flip from a stable state to a transient state under the action of an external pulse. Due to the effect of the RC delay link in the circuit, the transient state is maintained for a period of time and returns to the original steady state. The duration of the transient state is determined by the parameter value of RC.

The market for monostable triggers is part of the broader electronics industry, where they are used in various applications, including robotics and automation. Trends include miniaturization and integration into complex systems.
