Abstracts

The global Mooring Bollards market size is expected to reach \$ 265 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

In 2025, global Mooring Bollard reached approximately 3,704 k units, with an average global market price of around US\$ 45.63 per unit. Gross margin is about 43%. The cost is 26 usd. Production Capacity is about 4,000 k units. Mooring Bollards are heavy-duty marine fixtures installed on docks, quays, jetties, ports, and offshore platforms to secure mooring ropes or cables from vessels. They are designed to withstand high tensile loads from ships during berthing, loading, unloading, and tidal movement. Common types include tee head bollards, horn bollards, kidney bollards, pillar bollards, and double bitt bollards. Mooring bollards are typically made from cast iron, cast steel, ductile iron, or fabricated steel and are widely used in commercial ports, container terminals, naval bases, and offshore facilities.

Larger Size and Higher Load Capacity

With the growth of large container ships, LNG carriers, and offshore platforms, mooring bollards are developing toward higher load ratings and stronger safety performance.

Intelligent Monitoring

Future mooring bollards are expected to integrate load sensors, stress monitoring, remote alarms, and digital management systems to improve safety and maintenance efficiency.

Use of Corrosion-resistant Materials

Due to harsh marine environments, more high-strength steel, ductile iron, stainless steel, and advanced anti-corrosion coatings will be used.

Increasing Customization

Different ports, vessel types, and offshore facilities require different mooring solutions, leading to more customized and project-specific bollard designs.

Integration with Automated Ports

As smart ports and automated terminals continue to develop, mooring bollards will increasingly work together with automated mooring systems and digital port infrastructure.

Growing Demand from Offshore Energy

The expansion of offshore wind power, FPSOs, and offshore oil and gas platforms will drive demand for high-end mooring bollards.
