## Abstracts

According to our (Global Info Research) latest study, the global Mortar Adhesion Enhancer market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A mortar adhesion enhancer is an application agent that enhances the adhesion between the mortar and the construction surface to be bonded. It can be used in conjunction with a quenching agent and is also known as an adhesion primer. The bond strength of mortar adhesion enhancers is not proportional to the amount used, so it is important to use the proper dosage. When applied to the surface and allowed to dry before bonding cement or mortar, the adhesive bonds strongly to the coating, resulting in a high-strength repair.

Mortar adhesion enhancers are used as pre-treatment for repairing damaged blocks or concrete to strengthen the adhesion to the work surface. After the surface is cleaned of dirt before bonding to the repaired area, the mortar adhesion enhancer is applied to the entire surface with a brush or roller and allowed to dry completely.

In addition to application to the substrate, the adhesive can also be mixed with cement to strengthen the adhesion. In either case, the undiluted solution of mortar adhesion enhancer should be diluted to the appropriate concentration.
