The mortar delivery pump is driven by an electric motor. The main pumping system adopts an open oil circuit and constant power control. It has the dual functions of hydraulic stepless regulation and manual regulation of mortar delivery volume. The mixing system mixes the raw materials into pumpable shotcrete and loads them into the hopper. It can be used as a filling auxiliary device and storage for the pumpable shotcrete delivery pump. The mortar delivery pump consists of two parallel pump cylinders.

With the development of the national economy, the increase in industrial investment and supporting investment in water conservancy and municipal management, and industrial upgrading, industry demand is expected to increase steadily. Judging from the development plans of major downstream industries, downstream demand mainly involves new investment and technological transformation, such as focusing on the development of key equipment such as pumps and valves for special purposes, and research on new high-efficiency energy-saving water pumps and other energy-saving technologies.
